

REMOTE MONITORING SERVICES

IT TOOK HARD WORK

You likely have a great deal of money invested in your property, including product inventory, office and administrative equipment, and other assets you have worked hard to attain.

YOU INVESTED IN SECURITY CAMERAS

Fire, break-ins, and vandalism could severely impact your business, ruining its chances for survival.

An excellent step to take in securing what you value is investing in surveillance cameras.

ARE YOUR SECURITY CAMERAS GOING TO BE USEFUL WHEN YOU NEED THEM?

Last night's recording of a break in will not stop crime in real-time. You likely don't want to spend your free time monitoring the surveillance feed; you need a person, not footage or sirens.

Your Business Is Safe With Us!

Our operators actively monitor your site. With our premier technology your camera feed is processed through our command center, reporting all suspicious movement. This prompts an alert to our team along with live images sent to our security control center, allowing our trained security professionals to assess the situation and take proper action in real-time. These actions can include sounding an alarm, summoning the authorities, and speaking directly to those on site via integrated audio functionality.

BENEFITS OF REMOTE VIDEO MONITORING BY VISION DETECTION SYSTEMS

Cut Expenses

By having full-time monitoring across your entire premises, you can reduce the number of physical guards required to monitor and secure your property around the clock, and you can multiply this amount by the number of shifts in 24 hours.

Fully Vetted and Trained Staff

No longer do you have to train new staff. Our staff is fully vetted and trained continually to ensure that we stay up to date on all the latest in both security and technology.

True 24/7 Coverage

With our team there is no down time and no days off. No matter the circumstances, we have you covered.

Instant Response and Proper Coordination of Remote Events

Eyes on your entire property at all times means both faster and more accurate responses to any crisis. Our surveillance personnel can have a live view of the video feed from your devices and also of facility maps; we can map every floor plan and plot the security device of an organization on a map interface, providing our remote operators immediate situational awareness of the facility. This provides us with the ability to not only quickly respond but also to coordinate remote events properly.

US Based

Vision Detection Systems is located in Baltimore, Maryland.

Your Data is Properly Protected

Vision Detection Systems stores video footage on its own servers, not in the cloud. Our infrastructure and all its applications were created with the inclusion of the most rigorous industry-standard security measures. The software that we use for monitoring is UL Certified in the USA, BS8418 in Europe, and compliant with the most demanding corporate standards for IT and Networking security.

WE CAN PLOT SECURITY DEVICES AND FACILITY MAPS ON OUR MAP INTERFACE.
